

## Problem 2: University Examination System

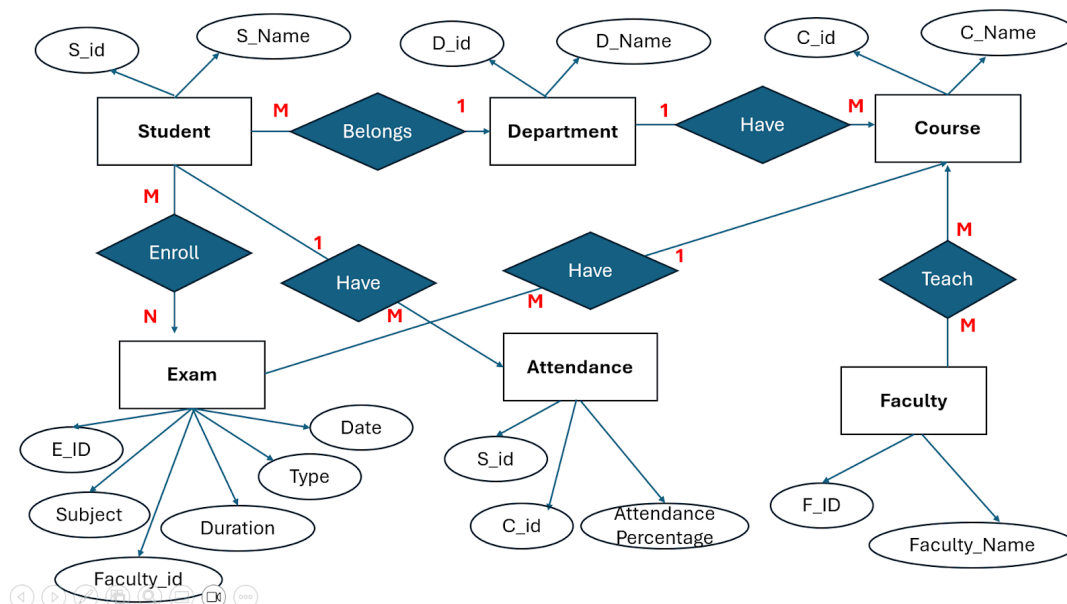

Design an Entity-Relationship schema for a university examination system that manages data about **exams**, **students**, **faculty members**, **courses**, and **departments**.

Each **department** has a unique name and is headed by a **faculty member**. A department can offer multiple **courses**, and each course has a unique course code, title, and is coordinated by a faculty member. **Faculty members** have an employee ID, name, and designation. They can teach multiple courses, coordinate specific courses, and also serve as heads of departments. A faculty member may handle multiple roles at once.

**Students** have a roll number and name, and each student belongs to one department. A student can enroll in multiple courses offered by that department. For each enrolled course, a student has an **attendance percentage** recorded.

**Exams** are created by faculty members. Each exam has a title, subject name (which is assumed to be the same as the course name), duration, date, type (internal or external), and is always linked to a specific course. Students may appear in multiple exams related to their courses, and for each exam, a student may have multiple attempts, with marks and attempt dates recorded for each.

All relationships between students, courses, faculty, and exams must reflect these associations clearly — such as student-course enrollment, faculty-course teaching, course-department mapping, and exam-course ownership.

### **Faculty Table - - - -**

```
CREATE TABLE cx(  
    employee_id INT PRIMARY KEY,  
    name VARCHAR(100),  
    designation VARCHAR(50)  
);cxz
```

### **Department Table - - - -**

```
CREATE TABLE Department (  
    dept_name VARCHAR(100) PRIMARY KEY,  
    head_id INT,  
    FOREIGN KEY (head_id) REFERENCES Faculty(employee_id)  
);
```

### **Course Table - - - -**

```
CREATE TABLE Course (  
    course_code VARCHAR(20) PRIMARY KEY,  
    title VARCHAR(100),  
    dept_name VARCHAR(100),  
    coordinator_id INT,  
    FOREIGN KEY (dept_name) REFERENCES Department(dept_name),  
    FOREIGN KEY (coordinator_id) REFERENCES Faculty(employee_id)  
);
```

### **Student Table - - - -**

```
CREATE TABLE Student (  
    roll_number INT PRIMARY KEY,  
    name VARCHAR(100),  
    dept_name VARCHAR(100),  
    FOREIGN KEY (dept_name) REFERENCES Department(dept_name)  
);
```

### **Exam Table - - - -**

```
CREATE TABLE Exam (  
    exam_id INT PRIMARY KEY AUTO_INCREMENT,  
    title VARCHAR(100),  
    subject_name VARCHAR(100),
```

```
duration INT,  
date DATE,  
type ENUM('internal', 'external'),  
course_code VARCHAR(20),  
creator_id INT,  
FOREIGN KEY (course_code) REFERENCES Course(course_code),  
FOREIGN KEY (creator_id) REFERENCES Faculty(employee_id)  
);
```

#### **Teacher Table - - - -**

```
CREATE TABLE Teaches (  
    employee_id INT,  
    course_code VARCHAR(20),  
    PRIMARY KEY (employee_id, course_code),  
    FOREIGN KEY (employee_id) REFERENCES Faculty(employee_id),  
    FOREIGN KEY (course_code) REFERENCES Course(course_code)  
);
```

#### **Enrollment Table - - - -**

```
CREATE TABLE Enrollment (  
    roll_number INT,  
    course_code VARCHAR(20),  
    attendance_percentage DECIMAL(5,2),  
    PRIMARY KEY (roll_number, course_code),  
    FOREIGN KEY (roll_number) REFERENCES Student(roll_number),  
    FOREIGN KEY (course_code) REFERENCES Course(course_code)  
);
```

#### **Attempts Table - - - -**

```
CREATE TABLE Attempts (  
    roll_number INT,  
    exam_id INT,  
    attempt_no INT,  
    marks DECIMAL(5,2),  
    attempt_date DATE,  
    PRIMARY KEY (roll_number, exam_id, attempt_no),  
    FOREIGN KEY (roll_number) REFERENCES Student(roll_number),  
    FOREIGN KEY (exam_id) REFERENCES Exam(exam_id)  
);
```
